

ON-GROUND REHABILITATION ACTION

Dawson Mine, Anglo American

Anglo American continues to pursue best practice mine rehabilitation across its business, including at Dawson Mine. This operation has been leading the way in innovative rehabilitation approaches, such as blasting techniques to reshape void highwalls, to achieve a post-mining landform for future use with the focus being grazing.

Under Anglo American's Sustainable Mining Plan, the company directs efforts to minimising impacts and delivering positive and lasting environmental outcomes. In meeting this commitment, 165 hectares of rehabilitated land at Dawson Mine is currently being used by local cattle graziers and cattle grazing trials are resulting in strong weight gain. This work has been showcased in the Mineral Council of Australia's 'More to Mining' campaign, which builds awareness of the industry's approach to its environmental responsibilities.
